

Production programming solutions for the STM32

(V 1.0.4 Dec, 2012)

The STM32 families are supported by a complete range of programming solutions from third-party tool suppliers, which are suited to a development environment or ready to integrate in a production environment. The Programmer type column indicates the type of programming tools offered:

- Single site: Single programmer with one socket
- Multi site: Programmer with several sockets or a single that can be linked
- ISP (in-situ programming): the programmer programs the device already soldered on the application
- Single site + ISP: Single programmer with a socket and ISP connections
- Multi site + ISP: Multi site programmer with sockets, offering an ISP connection for each socket
- ATE compatible: Single programmer that can be driven by automated test equipment
- Automated: Automated programming system with I/O media possible, i.e. tape input/output, tube input/output, tray
- Standalone: After being loaded, the tool does not need to be connected to a host
- Concurrent prog.: On a multi site programmer, programming starts when the chip is inserted in the socket

= in development, = available

Supplier	STM32 F0 Entry-level MCUs	STM32 F1 Mainstream MCUs	STM32 F2 High- performance MCUs	STM32 F3 Mixed- signal MCUs with DSP and FPU	STM32 F4 High- performance MCUs with DSP and FPU	STM32 L1 Ultra-low- power MCUs	STM32W Wireless MCUs	Programmer type	Link to MCUs supported list
